The FutureGateway framework

Monday, 21 November 2016 11:30 (1h 30m)

In this section will be first introduced the FutureGateway (FG) framework, described each of its components and explained how they work together. During the presentation will be also covered some security considerations related to the Science Gateway membership handling using as point of reference the standard baseline AAI mechanism provided by the standard FG installation and how to modify it to switch between already existing AAI mechanisms. The FutureGateway provides also a complete set of REST APIs to manage distributed computing resources, which will be briefly described.

Presenter: BRUNO, Riccardo (INFN Catania - Italy)
